

Ângelo Coelho

Software Engineer

angelorscoelho

angelorscoelho@gmail.com

angelorscoelho

angelorscoelho.dev

SKILLS

PROGRAMMING

PHP • C# • Python
JavaScript • TypeScript
SQL • Java

FRAMEWORKS

Laravel • .NET
ASP.NET • Vue.js
Node.js

DATABASES

SQL Server • PostgreSQL
MariaDB • MySQL • Redis

DEVOPS

Docker • Jenkins • Git
CI/CD • Azure (SSO/IAM)
Playwright • PHPUnit

KEY SKILLS

REST APIs
Event-Driven Systems
Microservices
Solace PubSub+
Azure Entra ID / SSO
AI-Assisted Dev
LEAN Methodology

EDUCATION

UNIVERSITY OF MINHO

BSc COMPUTER SCIENCE
2018
Braga, Portugal

LANGUAGES

Portuguese Native
English Proficient
Spanish Proficient
French Intermediate

SUMMARY

Senior Software Engineer (7+ years) specialising in fault-tolerant distributed systems, event-driven microservices, and high-availability backend platforms. Proven track record designing scalable data pipelines, optimising high-throughput systems under strict latency constraints, and leading AI-augmented SDLC practices. Backend-focused and E2E-capable, driven by modularity, code quality, and maintainability.

EXPERIENCE

BOSCH | SOFTWARE ENGINEER

Feb 2022 – Present | Braga, Portugal

- Architected off-peak ETL pipelines producing indexed SQL Views, eliminating lock contention and enabling KPI dashboards on a 99.9% SLA.
- Engineered fault-tolerant Solace PubSub+ consumers processing industrial telemetry at >1,000 events/min — enforcing <200ms E2E latency via GUID-based deduplication, concurrent job dispatch, DB transaction guards, and in-memory recovery buffering.
- Implemented Azure Entra ID SSO (app registration, permission scoping, dual-call JWT flow) with automatic user profile sync to the local store on login.
- Delivered full-stack features end-to-end — designing technical architecture, building custom frontend components from scratch (dynamic trees, multi-line grids, Ishikawa diagrams), and accompanying production rollouts.
- Championed LEAN methodologies, boosting team efficiency by 15% and reclaiming 240+ engineering hours/year (≈€11.5K).
- Architected AI-agentic workflows for automated PR reviews and unit test generation, cutting SDLC lead time by 15%.
- Architected and implemented CI/CD pipelines using GitHub Actions, custom state-machine CLI tooling, self-hosted runners, and automated N-5 backups to reduce deployment risk and operational overhead.

ETICADATA SOFTWARE (CEGID) | SOFTWARE ENGINEER

Nov 2018 – Jan 2022 | Braga, Portugal

- Led E2E development of hospitality and accounting modules for 500+ clients; refactored core invoicing engines to support 10x scale.
- Guided the migration of 20-year VB6 monoliths to .NET via decompilation pipelines, aggressively eliminating 1000+ line unmaintainable methods.
- Engineered a fault-tolerant extraction pipeline automating fiscal compliance across 5+ government portals (IRS, Social Security, pension authorities) — generating payment guides, tax statements, and fiscal extracts via XPath-based Selenium automation.
- Built a secure Identity Vault embedding automated state machines and Just-In-Time decryption to mitigate sensitive data legal risks.
- Optimised DB queries via EXPLAIN plans and developed low-memory UI engines for constrained hardware environments (4GB RAM / 100GB disk).
